Activon Manuka Honey®

At our state-of-the-art manufacturing facility in the UK, the Advancis range of medical grade Manuka Honey antimicrobial products, offer the unique combination of a high quality performance product at a competitive price.

- In-vitro clinical trials have demonstrated that low concentrations of Advancis Manuka honey prevented biofilm formation in MSSA, MRSA and VRE, whilst still maintaining its antimicrobial properties
- Effective debridement capabilities for faster wound bed preparation
- Deodorises wounds, positively impacting on a patient's quality of life
- Maintains a moist wound healing environment, facilitating faster healing of chronic wounds
- Extensive range of Advancis Manuka honey dressings, allowing the right dressing selection for each wound type
- Honey is non-cytotoxic and is a completely natural substance

Advancis Medical® bring the benefits of 100% Manuka honey into a versatile suite of wound healing that enable you to choose the right dressing for every phase of wound healing.

Actilite®

Non-adherent viscose net dressing coated with 99% Manuka honey and 1% Manuka oil

An inexpensive and highly effective broad spectrum antimicrobial dressing containing 99% Manuka honey and 1% Manuka oil for use on low to moderate exuding wounds.

The dressing is designed to protect a wound, promote healing and allow the passage of exudate. It is an ideal choice for epithelialising wounds that are perceived to be at risk of re-infection.

- **NEW!** Larger sizes including the unique 30cm x 60cm
- Light, flexible, low profile knitted net dressing ideal for use under compression
- Lower concentration of honey reduces potential for initial drawing sensation
- Can be used in combination with TNP
- Non-adherent, reducing pain and trauma
- Can be cut or folded to the shape of the wound
- Lightweight versatile dressing solution to be used when there is a clinical sign of infection and to prevent re-infection

Algivon®

Alginate dressing impregnated with 100% Manuka honey

An alginate dressing impregnated with 100% Medical Grade Manuka honey. The alginate fibres enable a sustained, slower release of honey.

Algivon® is an ideal choice for wetter wounds as the alginate has a small capacity to absorb, meaning the honey isn't washed away with exudate therefore staying at the wound site for longer. The dressing is very soft and conformable, ideal for cavities and debriding and de-sloughing large areas of necrotic and sloughy tissue.

- An absorbent alginate dressing delivering 100% pure Manuka honey
- A totally natural broad spectrum antimicrobial dressing
- Efficient debridement solution for sloughy and infected wounds
- Slower, sustained release of honey may reduce pain sensation experienced by some patients

The Activon® range contains all the well-known benefits of manuka honey as a broad spectrum antibacterial product, effective against most wound invading bacterial that are well known in today's healthcare environment. These include *Staphylococcus aureus*, *Pseudomonas aeruginosa*, VRE and possibly the best known, MRSA - challenging the need for routine antibiotics to treat wound infection.

Activon® is a natural alternative to the more common wound therapies such as silver, with none of the perceived challenges silver products face today, such as their cost-effectiveness, lack of efficacy and concerns around their safety/resistance¹.

Name	Size	Dressings per Box	PIP code	NHS code
